File preparation guidelines for output to Digital Slide

- 1.) Include all fonts the file uses on your disk. Be sure to include screen and print fonts.
- 2.) Included all placed images the file uses on your disk.
- 3.) Placed images should be saved as RGB in the application they where created in. Delete all paths and work channels, and flatten any layers. Placed images should be no larger than 10 MB; additional charges will apply for oversized files. Files over 25 MB may be too large to print.
- 4.) For scanned images, refer to resolution table to determine the best scanning DPI.
- 5.) In page layout programs (like Quark or Pagemaker) and in Illustrator, Choose a page/ document size of 7.33x11. (This is not necessary for bitmapped (photoshop) files.)
- 6.) We prefer bitmapped files be saves as a TIFF but can also be saved as a .peg, the yshouls also be saved as 8 bit RGB, and layers should be flattened.
